AIA ORBIT

EXCO PRE-READ · ONE-SLIDE VIEW

Only a few people can read the code that runs our business.
Orbit lets everyone ask it.

AIA Orbit is a next-generation knowledge copilot for our core systems. Ask in plain English, get answers in business language, see what a change would touch, and have the requirement, the tests and a compiler-checked code change drafted.

A COMPLICATED QUESTION, ANSWERED

Meet Orbit
Your knowledge copilot. **Just ask.**

~~7–15 days~~ → **minutes**

Scenario walkthrough · Impact map · Requirement · Test scenarios · Code change

SLIDE 1 Business and product owners

"Ask the system itself."

- **Answers on demand**
  Plain English in, business language out, no queue
- **Rules made visible**
  Business rules, decision tables, flows, built from the code
- **Impact before you commit**
  What a change touches: directly, also, downstream
- **Requirements and tests drafted**
  A first draft from how the system really behaves
- **Answers you can trace**
  Every answer cites the programs behind it

SLIDE 2 For AIA Singapore

"Knowledge that belongs to AIA, not a few people."

- **Knowledge protected**
  Survives retirements and role changes
- **Lower change risk**
  Impact seen before the work begins
- **Specialists freed**
  Fewer repeat questions, more engineering
- **Faster delivery of change**
  Weeks of manual tracing disappear
- **Stronger audit trail**
  Rules explained and traced to the code
- **Ready for modernisation**
  Know what you have before you move it

Beyond answers, to action: a coding agent carries a question through to a compiler-checked change proposal, always for a person to review.

WHY NOW · REGULATION, TECHNOLOGY AND THE MARKET

The systems are not going away, and the people who know them are scarce.

70+%
of business transactions worldwide are said to run on COBOL (IBM-cited)

≈15%
Projected 2026 IT-spend growth for Asia-Pacific life insurers (Celent, 219 insurers)

MAS
Proposes tighter change-management controls for insurers; consultation closed 31 Jul 2026, 12 months to comply once final

≈200 hrs
a month if 100 routine questions at 2 hours each no longer need a specialist. *Illustration; AIA's own baseline first.*

Sources: IBM claim as reported by NextBigFuture (2020) · Celent, Asia Pacific Life Insurance IT Pressures & Priorities 2026 · MAS Technology Risk Management Notices consultation (law-firm summaries, still a proposal).

7–15 days is the COBOL team's estimate of elapsed time, not effort; "minutes" to be confirmed in the pilot.
